Sieve Analysis

From the Grain Size Analysis as shown in the graph above, the Effective Grain Size (D_{10}) of given sample of gravels comes out to be 1.65762 mm, D_{60} comes out to be 4.35167 mm and the Uniformity Coefficient ($C_u = D_{60}/D_{10}$) comes out to be 2.62525

The C_u is more than 2 as per the recommendations of IS 4097:1967, Clause 4.2, thus the gravel is Non Uniform

Sir,

I am the Owner of "ARORA MEDICOS". We don't have any website for our **Medical Store Management** yet. Doing all the management work of medical store manually is very tedious and time consuming. That's why, we require a Website that is capable of storing all the details and information of medical store. The Website should be secure and user -friendly. So that it contributes to fast and systematic work flow.

To fulfill our requirement, I request you to depute your team that can provide us consultancy and develop the Website for our Medical Store. We will pay appropriate Consultancy fees for developing above said website.

Grain Size Analysis

From the Grain Size Analysis as shown in the graph above, the Effective Grain Size (D_{60}) of given sample of gravels comes out to be 1.399 mm, D_{60} comes out to be 2.724 mm and the Uniformity Coefficient ($C_u = D_{60}/D_{10}$) comes out to be 1.946.

The C_u is less than 2 as per the recommendations of IS 4097:1967, Clause 4.2, thus the Gavel is uniformly graded.

Grain Size Analysis

From the Grain Size Analysis as shown in the graph above, the Effective Grain Size (D_{10}) of the given sample of gravels comes out to be 1.399 mm, D_{60} comes out to be 2.724 mm and the Uniformity Coefficient ($C_u = D_{60}/D_{10}$) comes out to be 1.946.

The C_u is less than 2 as per the recommendations of IS 4097:1967, Clause 4.2, thus the Gravel is uniformly graded.

IS Code Referred: IS 4097:1967 "Specification for Gravel for use as Pack in Tubewells"

Grade of Steel Bars as per IS:1786-2008 Fe500

Company: TATA TISCON

Sample	Diameter (mm)	Length (mm)
T10	10	1000
T12	12	1000
T16	16	1000
T20	20	1000

Company: VIZAC

Sample	Diameter (mm)	Length (mm)
V12	12	1000
V16	16	1000
V20	20	1000
V25	25	1000

The specimens were tested for bend test by simple bending in accordance with IS 1599-2012

After bending the sample to 90° no cracks or rupture was detected at the bend portion.
Hence as per IS 1599-2012 the given samples have passed the bend test.

Sub :Quotation of Soil Testing

Respected Sir,

Following are the details of soil testing for calculation of Bearing Capacity

Standard Penetration Test is performed for calculation of bearing capacity, for which boreholes are to be created at site and data is collected. Each Borehole will cost Rs.6600/-.
Atleast four boreholes are to be created at the given site.

Total Cost including transportation charges = $3 \times 6600 = \text{Rs. } 19800/-$

Terms and Conditions:

- Full payment shall be made in advance
- The above said rates are inclusive of all taxes.
- The test report refers only to the sample/construction materials submitted for the test by the client/agency.
- The test shall not be used for sales promotions or advertisement.
- The test results shall not be used for legal purposes.

Report on Verticality of OHSR

Location: Shri Chand Dera, UBD Canal, Taran Tarn Road, Amritsar.

The OHSR located at Shri Chand Dera, UBD Canal, Taran Tarn Road, Amritsar was tested for its verticality using Total Station (Nikon). Due to limited accessibility around OHSR, the three point circle method has been adopted for checking the lateral shift of centre of circum circle at base and at a height of 17.642 m.

Date of Testing	:	20.07.2016
Instrument used	:	Total Station (Nikon DTM-322)
Description of Structure	:	OHSR-02
Methodology used	:	Three point circle
Shift of Centre	:	0.189%
Result	:	Minor error found in the verticality of the OHSR, which is within permissible limits as per Doc: CED38(7811) - June 2011 (preliminary draft) - Criteria for Design of RCC Staging for Overhead Water Tanks (First Revision of IS 11682).

Terms and Conditions:

- Test report only refers to the OHSR mentioned at above location only.
- The test report shall not be used for sales promotions or advertisements.

Dear Sir

1. Ref personal liaison in your office by contractor (M/S RCCIVL-LITL JV) rep along with our staff, you are requested to carry out the following tests for the above mentioned project.
 - (a) Bitumen premix semidense Asphaltic concrete 40 MM thick design mix (job mix formula) using 5.5% Bitumen VG-30 (binder) as per CA sch 'A' section IV item No-27 (copy attached)
 - (b) Bitumen premix Asphaltic concrete 25 MM thick design mix (job mix formula) using 5.00% Bitumen VG-30 (binder) as per CA sch 'A' section-IV item No-29 (copy attached)
2. Necessary material as per CA for the same will be submitted by contractor under intimation to this office as per page No 301 & 302 (copy enclosed).
3. Request intimates the charges and other formalities for the above test. Charges of testing will be borne by M/S RCCIVL-LITL (Joint Venture) who is contractor for this work.
4. You are requested to carry out all relevant tests as per IS codes and CA provision provisions as mentioned above for the above samples and forward all result stating the adherence/non adherence to relevant IS code and to CA provision.
5. Test result may please be forwarded direct to this office.

PARTICULAR SPECIFICATIONS (Contd.....)**23.5.2 MATERIALS**

- a) **BINDER:** The binder shall be straight run bitumen of a suitable grade satisfying the requirements of IS: 73. The actual grade of the binder shall be decided by the DEPMC /PM MAP
- b) **COARSE AGGREGATE:** The coarse aggregates shall consist of crushed stone, crushed gravel (shingles) or other stones. These shall be clean, strong, durable, of fairly cubical shape, free of disintegrated pieces, organic or other deleterious matter and adherent coatings. The aggregates shall preferably be hydrophobic and of low porosity and shall satisfy the physical requirements
- c) **FINE AGGREGATES:** The fine aggregates shall be the fraction passing 2.36 mm sieve and retained on 75 micron sieve, consisting of crusher run screenings, natural sand or a mixture of both. These shall be clean, hard, durable, uncoated, dry and free from any injurious, soft or flaky pieces and organic or deleterious substances.
- d) **FILLER:** The filler shall be an inert material, the whole of which passes through 600 micron sieve, at least 90 per cent passing through 150 micron sieve and not less than 70 per cent passing through 75 micron sieve. The filler shall be stone dust, cement, hydrated lime, fly ash or other non-plastic mineral matter approved by the DEPMC /PM MAP

5.3 AGGREGATE GRADATION: The minerals aggregates, including minerals filler for semi dense bituminous concrete shall be so graded or combined as to conform to the grading set forth in table 500-20 of Specifications for Road and Bridge Works issued by Ministry of Surface Transport (Roads Wing) unless otherwise directed, Grading-1 shall be adopted for 25 mm compacted thickness and Grading-2/3 for higher thickness

TABLE: AGGREGATES GRADATION FOR SEMI-DENSE BITUMINOUS CONCRETE

PARTICULAR SPECIFICATIONS (Contd.....)

23.5.4 MIX DESIGN

23.5.4.1 REQUIREMENT OF MIX: Apart from conformity with the grading and requirements of individual ingredients, the mix shall meet the requirements set forth

23.5.4.2 BINDER CONTENT: The binder content shall be so fixed as to achieve the requirement of the mix set forth in tables 500-20 & 500-23 mentioned above and shall be in the range of 4.5 to 5.5% by weight of total mix.

23.5.5 JOB MIX FORMULA: The contractor shall intimate to the DEPMC /PM MAP in writing at least 20 days before the Start of the work,

Requirements of Asphaltic Concrete Mix / Semi Dense Bituminous Concrete

Sl no.	Description	Requirements
1	Marshall stability (ASTM designation : D 1559) determined on Marshall specimens compacted by 75 compaction blows on each end	820 Kg minimum
2	Marshall flow (mm)	
3	Per cent voids in mix	2-4
4	Per cent voids in mineral aggregate filled with bitumen	3-5
5	Binder content per cent by weight of mix	65-75 4.5-5.5

The job mix formula proposed to be used by him for the work and shall give the following details:

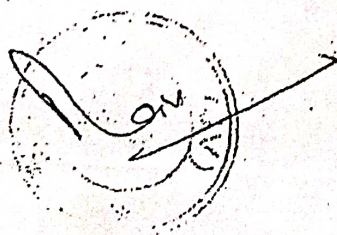

- i) The source and location of all materials.
- ii) Proportions of all materials expressed as follows where each is applicable:

(a) Binder	As percentage by weight of total mix.
(b) Coarse aggregate I	
Coarse aggregate II	as percentage by weight of total aggregate including minerals filler
Fine aggregates I	
Fine aggregates II	
Minerals Filler	
- iii) A single definite percentage passing each sieve for the mixed aggregate
- iv) The results of test enumerated in tables mentioned above as obtained by contractor.

While working out job formula the Contractor shall ensure that it is based on a correct truly representative sample of the materials that will actually be used in the work and the mix and its different ingredients satisfy the physical strength requirements of specification.

Approval of the job mix formula shall be based in independent testing by the DEPMC /PM MAP for which samples of all ingredients of the mix shall be the responsibility of contractor as required by the former.

The approved job mix formula shall remain effective unless and until modified by the DEPMC (MAP). Should a change in the source of materials be proposed a new job mix formula shall be established and got approved from the PM before actually using these materials.

Geotechnical Report for Bearing Capacity of Soil

Project Name: Site for Boiler at Radha Raman Processors, Fairland Colony,
Fatehgarh-Churian Road, Amritsar

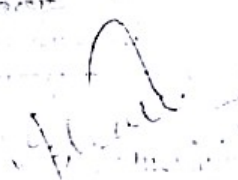

For a square foundation of size 1.5m at a depth of 1.5m from NGL net allowable bearing capacity can be taken as **17 t/m²**.

Detailed report of bearing capacity of soil is attached.

Terms and Conditions:

- The test report refers only to the sample/construction materials submitted by the client/agency.
- The test shall not be used for sales promotions or advertisement.
- The test results shall not be used for legal purposes.

**DETAILED REPORT OF BEARING CAPACITY OF SOIL FOR CONSTRUCTION OF
BOILER AT RADHA RAMAN PROCESSORS PVT. LTD, FAIRLAND COLONY,
FATEHGARH-CHURIAN ROAD, AMRITSAR**

1. INTRODUCTION

The soil investigation for this project was carried out to find out bearing capacity of soil and recommended suitable depth of foundation for proposed building. The soil investigation comprised of performing standard penetration test (SPT) or Dynamic Cone Penetration Test (DCPT) in case site comprise of gravel boulders, collection of soil samples for bearing capacity parameters and then calculating bearing capacity.

2. FIELD TESTING

Standard split spoon sampler was attached to lower end of "A" drill rods and was driven into bore holes by standard hammer of 63.5 kg falling from a height of 75.0 cm. The hammer was driven 45.0cm and numbers of blows required for each 15.0cm (10.0cm in case of loose soil) were recorded. First 15.0cm penetration was not taken into account (For SPT) and was considered as seating drive (For SPT). The number of blows for last 30.0cm penetration was designated as "N" value. Two bore holes were planned at periphery of proposed Boiler. The bore holes were investigated up to the depth of 8 m. Soil strata encountered in the bore holes comprises of cohesion less soil of loose to medium consistency.

The observed values of the Standard penetration resistance were recorded. Where the soil consists of cohesion less strata, the observed SPT values designated as " N_o " have to be corrected to account for following:

a) OVERBURDEN PRESSURE CORRECTIONS $N_n = C_n \times N_o$

Where C_n = overburden pressure (OBP) correction $= 0.77 \log_{10}(2000/OBP)$

N_n = normalized blows N = Observed number of blows OBP = overburden pressure

b) DILATANCY SUBMERGENCE CORRECTION - This correction is applied for fine sands and silts under water & When $N_n > 15$ as:

$$N_c = 15 + (N_n - 15)/2 \quad \text{where } N_c = \text{final corrected value.}$$

Overburden correction is applied first and then dilatancy correction

3. DEPTH OF FOUNDATION:

Soil exploration at the proposed site revealed that the site comprise cohesion less soil of very loose to medium consistency. In the absence of data 1.5m x 1.5m footing at depth of 1.5m from NGL has been assumed.

4. CALCULATION OF BEARING CAPACITY:

The safe bearing capacity of soil (q_s) is determined so that the following conditions are satisfied:

- a) The footing must not settle more than a permissible value taken from IS: 1904-1986 (50 mm in this case). i.e. the net safe bearing pressure from settlement criteria q_{sp}
- b) The footing must be safe against the shear failure i.e. the net ultimate bearing capacity q_{nu}
- c) Practically no ground water was encountered on site upto 8 m but for design consideration soil is assumed to be fully submerged so water table correction 'w' is taken to be 0.5

5. DIMENSIONS OF PROPOSED SHALLOW FOOTINGS:-

Due to the non-availability of data from the client we assume a square footing of width 1.5m at 1.5m below natural ground level and collected soil samples of 20 cm length from sampler

6. BEARING CAPACITY BASED ON SETTLEMENT CRITERIA IS 6403:1971

As per IS 6403:1971 the net safe bearing pressure (q_{np}) is given by the equation:

$$q_{np} = 5.54 \cdot (N_{av} - 3) \cdot (B + 0.3)^2 \cdot w' \cdot s / (2B)^2 \cdot 40$$

(s in this case is taken to be 50 mm)

For Borehole 1, $q_{np} = 17.18 \text{ t/m}^2$

For Borehole 2, $q_{np} = 21.59 \text{ t/m}^2$

7. BEARING CAPACITY BASED ON SHEAR CRITERIA (IS 6403 - 1981)

The net ultimate bearing capacity (q_{nu}) calculated as per IS 6403-1981.

$$q_{nu} = C N_c S_c d_{c,i_c} + \gamma D_f (N_q - 1) S_q d_{q,i_q} + 0.5 \gamma B_f N_y S_y d_{y,i_y} w'$$

RECOMMENDATIONS /REMARKS

- For a square foundation of size 1.5m at depth of 1.5m from NGL net allowable bearing capacity can be taken as 17 t/m^2 for design purpose.
- 2) The allowable bearing capacity depends upon the shape, depth and type of footing so for any other such parameter the bearing capacity can be calculated accordingly.
 - 3) These recommendations are based on the soil conditions encountered during exploration. If during excavation / construction any significant departure from the assumed conditions is noticed, the design may need modification after consultation with soil consultants.
 - 4) This report is not for techno-legal purposes.

Subject: Building Materials testing/designing/analysis-regarding.

Sir,

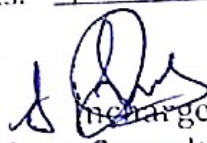

I/We/M/s. Shree Radha Ramen Pransari (P) Ltd. want to get the following items tested/analyzed designed :

- 1 SPT of Soil
- 2 _____
- 3 _____
- 4 _____
- 5 _____

You are requested to intimate us the total charges for the above said items and oblige.

To

Sub Divisional Engineer,

Pb. W/S & Sew. Sub Div. No. 07

As per letter no-114 dated 21-02-2017

Subject- design Mix M30 , providing water supply, sewerage in extended limit of M.C. Ajnala Town,
Distt- Amritsar (under PIDB)

Mix Design 30

1. Grade Designation-M30
2. Type of cement-PPC ,Shree
3. Maximum Nominal size of aggregate-20mm
4. Minimum cement content-320kg/m³
5. Specific Gravity of cement = 2.95
6. Specific gravity of coarse aggregate= 2.75
7. Specific gravity of Fine aggregate= 2.74

Design Steps

a. Target Strength mix proportioning

$$F_t = f_{ck} + 1.65(S)$$

From, IS: 10262-2009

Standard deviation, $S = 5$

$$\text{Target Strength} = 30 + 1.65(5) = 38.25 \text{ N/mm}^2$$

Selection of water cement ratio from the table 5 of IS: 456-2000

Maximum water cement ratio = .45

Adopted W/C= 0.38

$0.38 < 0.45$ Hence ok

b. Selection of water content from table 2 of IS: 10262-2009

Maximum Water content = 186 litre for 20mm aggregate

$$\text{Estimated water content} = 186 + \frac{3}{100} \times 186 = 191.58 \text{ litre.}$$

[Handwritten signature]
[Handwritten signature]

c. Calculation of cement content

Water cement ratio = 0.38-

Cement material content = $191.58 / 0.38 = 502.421 \text{ Kg/m}^3$

From table 5 IS : 456-2000 minimum cement content for moderate exposure condition = 320 Kg/m^3

$502.421 \text{ Kg/m}^3 > 320 \text{ Kg/m}^3$ Hence OK

It is restricted max up to 450 Kg/m^3

Cement adopted = 450 kg/m^3

d. Proportion of volume of coarse and fine aggregate from table 3

Volume of aggregate corresponding to 20mm size aggregate and fine aggregate Zone 3 for

Water cement ratio = 0.38(0.62)

Correction = 0.01

Corrected volume of coarse aggregate = 0.64

Therefore volume of coarse aggregate = $0.64 + 0.01 = 0.65$

Volume of fine aggregate = $1 - 0.65 = 0.35$

e. Mix Proportions

Cement = 450 kg/m^3

Water = 198 Kg/m^3

Fine aggregate = 627.186 Kg/m^3

Coarse aggregate = 1164.774 Kg/m^3

Water cement ratio = 0.38

Actual Mix proportion after considering absorption value cement:

Cement = 450 kg/m^3

Water = 198 Kg/m^3

Fine aggregate = 627.186 Kg/m^3

Coarse aggregate = 1164.744 Kg/m^3

20mm aggregate = 524.1348 Kg

10mm aggregate = 640.6090 Kg

Water cement ratio = 0.38
